**Clematis**

<b>Name</b>	<b>Flower</b>	<b>Bloom Time</b>	<b>Height</b>	<b>Pruning</b>
911	6-8" sky blue with cream stamens	May & June	6-8 feet	Category 2
Cardinal Wyszynski	This award winner is free-flowering with 6-8" glowing crimson flowers each highlighted by a central cluster of dark anthers	June-July, September	9-12 feet	Category 3
Dr. Ruppel	Large red flowers with deep red-pink stripe. Filaments white with cream-beige anthers. Occasional early flowers may be semi-double.	May and June	8-10 Feet	Category 2
Fuyu No Tabi	Very large, 6-8", bright white blooms. Eye catching white stamens with garnet red tipped filaments make this white variety a must have in any landscape!	May-June, August-September	6-8 Feet	Category 2
General Sikorski	Large mauve-blue flowers with creamy white filaments and yellow anthers. There us a faint red or pink bar running from the base to about half way along the tepal. A very free-flowering clematis.	May-June, August-September	10-12 Feet	Category 2
H. F. Young	A free flowering cultivar. Single or Semi-Double. Blue flowers are profusely born through May - June. During Summer it is repeat flowering and excellent for container gardening.	May-August	6-8 Feet	Category 2
Huvi	Huvi is a hardy vigorous variety with deep red velvety blooms. Each flower teppel becomes uniquely reflexed towards the tip making it easily identifiable.	June-August	6-8 Feet	Category 3

Name	Flower	Bloom Time	Height	Pruning
Ilka	Large, 5" flowers have frilled edges and pointed tepals, mauve with darker lavender stripes in color, set off by a stunning dark maroon stamen cluster.	June - September	6-8 Feet	Category 3
Marie Louise Jenson	Large Purple, 6 inch flowers without standing anthers that darken with maturity. An ideal cultivar for trellis or within mixed plantings.	May and June, September and October	6-8 feet	Category 2
Nelly Moser	6-8" pale mauve-pink with wide carmine bar and deep red stamens	May and June	6-8 feet	Category 2
Niobe	One of the most stunning clematis hybrids available, with large flowers opening as black ruby red velvet. The color then changes to a brighter shade as it matures. The cream stamens contrast nicely on the rich velvety sepals.	June-September	8-10 feet	Category 2
paniculata (Sweet Autumn)	Handsome climbing vine displays billowy masses of fragrant creamy-white flowers against leathery dark green leaves in fall. Seed heads are silvery. Great for arbors, fences, an cut flowers.	August-September	20-30 feet	Category 3
Pink Fantasy	These large 4-6" blooms are bright Pink with deeper pink bar. The compact nature of this variety makes it suitable for patio containers or planters.	July-September	8-10 Feet	Prune back to approximately 24" to promote bushy, full growth and multiple blooms. Category 3 variety that blooms on "new wood".

Name	Flower	Bloom Time	Height	Pruning
Honey Baby Honeysuckle	Large creamy-yellow fragrant flowers	July thru October	6-7 feet	Category 2
Indian Summer Trumpet Vine	3-inch long orange-red flowers on first years growth	Midsummer	12-15 feet	None
Major Wheeler Honeysuckle	Fragrant red, trumpet flowers	All summer	6-10 feet	Category 2

**Category 1:** These varieties produce flowers from the mature growth of the previous season. These plants should be allowed to finish blooming in the very early spring before they are pruned, therefore pruning should take place in late spring or early summer. The vine should then be fertilized and trained back on to its support in anticipation of the next year's show. Some of the category one clematis varieties will produce a modest show of bloom in the fall as well.

**Category 2:** These varieties will produce flower bud from both old and new growth. Early blooming will come from last year's mature growth while later in the summer and early fall more blooms will be produced from the current year's growth. Clematis in category two should not require major pruning. Pruning can be used to keep the vines growth in check and to remove any dead or weak growth. This should be done after the early blooming period. The old seed heads from the early blooms should be removed. This will help to maximize blooming later on in the year.

**Category 3:** These varieties produce flowers from the current year's growth. This clematis tends to flower mid to late summer. They should be pruned in early spring, just as the dormant vine begins to grow. This should be a hard pruning leaving only one or two nodes of growth above the ground. This type of pruning will encourage vigorous growth.
